

360° LED warning light

<https://ehle-hd.com/en/product/360-led-warning-light/>

The **magnetic LED rechargeable warning light** ensures significantly greater safety and visibility in road traffic. Thanks to our special magnetic caps (included in delivery), the warning light can be quickly and securely attached to reflective cones or pyramid folding signs.

In contrast to passive reflections, the active flashing signal warns other road users early on and from a greater distance of unusual or dangerous situations. The 360° visible orange warning function thus significantly increases safety on construction sites, in the event of breakdowns, or during safety measures.

The compact flashing light is approved in accordance with § 53a (3) StVZO in Germany, rechargeable, and therefore ideal for professional use.

Features

- Rechargeable, magnetic LED warning light with 360° visible orange flashing signal
- Compact & flexible: Quickly mounted on traffic cones (pylons) or vehicle roofs
- Magnetic attachment: Secure hold on ferromagnetic surfaces, e.g., folding signals, manhole covers, or vehicles
- Powerful Li-ion battery: Up to 15 hours of runtime, incl. 80 cm USB-C charging cable
- 18 high-performance LEDs with up to 140 lm for high visibility day and night
- Road approval in Germany in accordance with § 53a (3) StVZO (TÜV & KBA approved)
- Protection class IP54: Resistant to dust, splash water, and shocks

Please observe the applicable legal regulations and special requirements in countries outside Germany.
