

## cable guides - flexible

<https://ehle-hd.com/en/product/cable-guides-flexible/>

The **cable guides** protect your camera cable from sharp edges and chafing at the bottom edge of the shaft. With the deflection devices, the service life of the camera cable is considerably increased. The advantage of the 4-part of the flexible guides is that they adapt to every situation in the shaft. The devices have quick-releases to insert the camera cable quickly and easily. For SAT or robot systems we offer cable guides with double roller guides. Thus a clean guidance of the cable packages is possible without any problems.

Note: All flexible guides for the lower edge are supplied with 10 m working rope.

### Features

- prevent typical scraping of the cable sheath or pushcable breakage (SAT systems)
- with spring quick-release fasteners
- Rollers and axle can be changed easily
- 10 m working line included
