

## lateral packer

<https://ehle-hd.com/en/product/lateral-packer/>

The **lateral packers (sanitary packer)** are designed for the targeted rehabilitation of pipes with very small nominal diameters. Thanks to their compact design and fixed packer end, they can be pushed safely through tight bends to the damaged area.

They are particularly suitable for lateral house connection pipes, e.g., kitchen and sanitary pipes, where standard packers cannot be used.

### Features

- diameter ranges: 25–35 mm and 35–50 mm
- use with the smallest pipe diameters, e.g., kitchen or sanitary pipes
- fixed packer end for pushing over bends
- operating pressure: 3 bar
- available lengths: 600 mm, 1000 mm, and 1500 mm
- ideal for spot repairs on lateral pipes
- suitable for narrow, confined, or hard-to-reach pipes
