

Magnetic cover lifter with curved base

<https://ehle-hd.com/en/product/magnetic-cover-lifter-with-curved-base/>

The **universal magnetic manhole cover lifter with curved base** is the ideal solution for safely and efficiently lifting manhole covers – especially round covers filled with concrete or asphalt. The specially curved magnetic base is equipped with 18 powerful neodymium magnets and achieves an impressive magnetic pulling force of 420 kg.

The cover lifter can also lift all other common covers or grates made of cast iron and iron materials. For hinged manhole covers, the device has an extendable crossbar that enables optimal and controlled opening. In combination with the optionally available trolley, covers are not only easier to lift, but can also be moved with less effort – ideal for daily professional use.

Features

- Curved magnetic base for optimum adhesion to round manhole covers
- 18 neodymium magnets with a magnetic pulling force of 420 kg
- suitable for manhole covers, grates and covers made of cast iron and iron materials
- integrated, extendable crossbar for convenient opening of hinged covers
- optionally available transport aid for energy-saving movement of covers
- telescopic and foldable handle for minimal space requirements
- high lifting force with low total weight (only 7 kg)
- **includes non-magnetic transport bag for safe transport and protection**

Attributes

Image	SKU	Productname	Attributes	LxWxH & Weight
	1130202	magnetic cover lifter - curved base	magnet tensile forces: 420 kg	280 × 120 × 550 mm 7.0
	1130200	Trolley for magnetic cover lifters	type: accessories	160 × 160 × 400 mm 7.0
