

manhole top roller

<https://ehle-hd.com/en/product/manhole-top-roller-2/>

The **manhole top roller** is placed on the manhole to prevent wear on the sewer cleaning hose (for high pressure hoses and camera cables). It also makes the cleaning process easier for the operator - particularly practical in situations where the hose reel cannot be placed close to the duct opening.

The manhole top roller edge is adjustable to different sized manhole openings.

Features

- suitable for high-pressure hoses and camera cables
- adjustable in size from 560 - 760 mm for shaft openings of different sizes
- large, smooth-running deflection roller 225 mm for hose and camera cable
- extremely robust and galvanized steel construction
