

Nitrogen pressure kit

<https://ehle-hd.com/en/product/nitrogen-pressure-kit/>

The **nitrogen filling unit** enables the camera systems to be filled with overpressure. Unlike our standard CO₂ filling unit, our nitrogen filling set is used on ATEX-certified camera systems and thus enables safe working in the ATEX zone. It can of course also be used on systems without ATEX certification.

Pressurisation is safe, quick and easy. The desired pressure can be set easily and legibly on the pressure gauge via the pressure reducer.

Features

- for filling inspection systems of various manufacturers
- Primarily used on camera systems with ATEX certification
- 2.0 litre high pressure bottle refillable
- approx. 200 bar operating pressure
- **Attention: When transporting in a vehicle, the filling fitting must not be mounted on the bottle.**

Complete set consists of:

- 2.0 litre high-pressure bottle N₂ (200 bar)
- 1 x pressure gauge for cylinder pressure
- 1 x pressure regulator with manometer
- 1 m filling hose with valve connection
- 2x special clamps for installation in the vehicle
