

pick nozzles three-sided

<https://ehle-hd.com/en/product/pick-nozzles-three-sided/>

The **three-sided pick nozzles** are used for picking up hard blockages of any kind, such as mineral deposits, ice, mud crusts, sand, hardened grease, etc. The pick nozzles generate kinetic energies and ram the pick blades into the deposits. The front nozzles penetrate the material, cut it up and flush away the loose material.

Features

- Removal of pipe blockages from DN 40 - 500 mm, such as mineral deposits, ice, sludge crusts, sand, hardened grease
- for cleaning blocked pipes, sewers and drainages
- for medium performance and posture lengths
- **can be used on vehicles with water recovery**

Nozzle inserts:

The nozzles are fitted as standard with all-ceramic or ceramic-in-VA nozzle inserts. Other nozzle inserts are available on request. In order to optimally match the nozzle to the flushing unit, we require the pump capacity (litres per minute), the working pressure (bar) as well as the length, diameter and material of the high-pressure hose.
