

Rescue Hooks

<https://ehle-hd.com/en/product/rescue-hooks/>

The **rescue hooks** (also called fire hooks) are used to lift out bulky goods (e.g. a fallen leaf catcher, metal objects, root fox etc.) in collectors, shafts, pumping stations, separators or pits without any problems.

The particularly robust design also serves to loosen (or knock off) solid deposits such as sludge clods, concrete or similar. In addition, you can also equip the tip with a POWER magnet (tensile force: 100 kg) and thus recover ferro-metallic objects in filled pits or structures.

Features

- Material Stainless steel
- for recovering or lifting out bulky objects
- for removing solid deposits such as sludge clods, concrete or the like
- Power magnet with 100 kg pulling force optionally available, for recovering ferro-metallic objects
- Can also be used as fire hook
- Attachment tool for our telescopic poles
- Also available as rope version with rope eyelet
