

Twister metal grinder

<https://ehle-hd.com/en/product/twister-metal-grinder/>

The **Twister metal grinder** from Picote, with its carborundum stone head, quickly and efficiently grinds away the most common metals. It can be used to remove reinforcing steel, steel rods, nails, screws and lead metals from DN100 pipes.

The centering brushes provide additional stability and enable safe use in PVC, PE, cast iron, concrete, and stoneware pipes.

Features

- removes reinforcing steel, steel rods, nails, screws and lead metals
- replaceable carborundum grinding head
- efficient use in pipes from DN 100
- centering brushes for precise guidance and safe operation
- gentle on PVC, PE, cast iron, concrete, and stoneware pipes
- ideal in combination with the Smart Cutter for smooth pipe interior surfaces

Important note:

When using in plastic pipes, a reduced speed is recommended to avoid heat build-up and local melting of the metals to be removed. For perfect results, the Twister metal grinder can be optimally combined with the Smart Cutter™ to smooth any sharp edges remaining after grinding.
